The Nebraska National Forest and Grasslands is a unique area comprised of three grasslands, two national forests, and the oldest federal tree nursery in the United States. Over the last two decades, the Thayer Fire, Fort Robinson Fire, and Douthit Fire have claimed the majority of mature pine forest in this area of Nebraska. The future of this ponderosa pine forest is in jeopardy; without human interaction there will be no seed source to reestablish this distinctive ecosystem.

REASON FOR PLANTING

- TIME: April 2016
- TREES: 15,000
- SPECIES: ponderosa pine
- ACRES: 75
